PROFILE

Data scientist with about 14 months as a Data Scientist at Telyport (logistics) and two earlier internships in data science and data analytics. Now studying for an MSc in Data Science & Artificial Intelligence at DSTI School of Engineering, Paris. I work across the data stack: SQL and Python for data preparation, scikit-learn and XGBoost for predictive models, Flask/FastAPI for serving them, and Power BI/Tableau for reporting. Looking for a six-month internship or apprenticeship (alternance), subject to my study schedule and internship agreement.

EXPERIENCE

Data Scientist — Telyport Dec 2024 – Feb 2026

- Developed predictive models using Python, scikit-learn and XGBoost, working on ETA prediction and demand forecasting.
- Worked on feature engineering and model evaluation.
- Developed and maintained data pipelines using AWS EC2, S3 and RDS.
- Created Power BI and Tableau dashboards for operational reporting.
- Used SQL for data extraction, cleaning and validation; developed Flask REST API model-serving solutions.

Data Science Intern — Rubixe Disruptive Technologies Jun 2024 – Dec 2024

- Performed exploratory data analysis and data cleaning.
- Developed regression and classification models in Python, using pandas and scikit-learn for analysis and modelling.

Data Analytics Intern — Shiash Info Solutions Private Limited, Chennai Dec 2023 – Feb 2024

- Cleaned and prepared data using Python, SQL and Excel; helped automate data-cleaning steps and recurring reports.
- Built dashboards for KPI tracking and reporting.

PROJECTS

Sentinel-lite — late-delivery risk ranking Independent project · github.com/NadavaluruSashank/sentinel-lite

- Public Olist e-commerce data (96,470 delivered orders): PostgreSQL + SQL views, logistic-regression risk ranking, FastAPI scoring endpoint, Streamlit monitoring dashboard.
- Chronological holdout: ROC-AUC 0.704; the top 5% of model-ranked orders were late 2.57× as often as the test-period average (ranking lift, uncalibrated scores). Local prototype.

Delivery Time Prediction Simulated data

- XGBoost regressor on 5,000 simulated orders served via a Flask REST API; MAE 3.25 min, R^2 0.974 on simulated data.

Smart Traffic Management Simulated data

- Random Forest congestion classifier on simulated IoT sensor data, rule-based signal-timing suggestions and a Streamlit dashboard.

AES Image Encryption Bachelor's project

- PyQt5 desktop app encrypting images with AES-256 (CBC) and restoring them losslessly.

AWS-hosted portfolio In progress

- CloudFormation for a private S3 bucket behind CloudFront (OAC, HTTPS) with a GitHub Actions deployment using OIDC and a least-privilege IAM role.

EDUCATION

MSc, Data Science & Artificial Intelligence — DSTI School of Engineering, Paris Mar 2026 – Mar 2028 (expected)

B.Tech, Electronics & Communication Engineering — Panimalar Engineering College, Chennai 2020 – 2024

CERTIFICATIONS

- Neo4j Certified Professional — Neo4j GraphAcademy, Jul 2026
- Certified Data Scientist, Gold (91%) — NASSCOM, Apr 2025
- Data Science Foundation — IABAC, Dec 2024

SKILLS & LANGUAGES

Programming & data: Python, SQL, pandas, NumPy
Machine learning: scikit-learn, XGBoost, predictive analytics, feature engineering, model evaluation
Databases & BI: PostgreSQL, Power BI, Tableau, Streamlit, Excel
APIs & engineering: FastAPI, Flask, REST APIs, Docker, Git
Cloud: AWS EC2, S3, RDS
Languages: English — Fluent · Telugu — Native · French — Beginner (A1)
